The stations do not have to be "weathered" before they are used in the child, dog, and adult-use tests. Separate tests of weathered and unweathered units should not be necessary.

Hi Bill:

I have a question regarding the testing of reclosable rodent bait stations. If a company is applying for a Tier 1 Bait Station, does the bait station need to be weathered before performing the testing on adults, children and dogs? Does the testing also need to be conducted with un-weathered bait stations on adults, children and dogs?

Thank you for your time.

Best regards,
